

HINCKLEY JET BOAT PACKAGE HIGHLIGHTS

Hinckley's unique jet boat storage programs are designed to preserve your boat in Bristol condition and with peak operating performance. This comprehensive service, covering all mechanical, electrical and cosmetic needs of your Hinckley, is the only one of its kind in the marine industry. We have specifically designed our packages to consider your location of usage, offering winter storage packages in our northern yards and summer storage packages in our Southern yards.

The Hinckley Jet Boat Storage Package offers a turn key solution with quality and convenience unsurpassed in the marine industry. We at Hinckley know your boat better than anybody. The Jet Boat Package provides our clients with the confidence that comes with knowing your Hinckley is being serviced by experienced, factory trained technicians.

For one package price, Hinckley will retrieve your boat from its seasonal use location and deliver it back to the Hinckley yard where it will be sea-trialed and inspected. It will then be put in one of our heated storage buildings where all required maintenance is completed. When the boating season returns, the boat is launched, commissioned, tested and fully cleaned, polished and detailed before it is re-delivered back to its home location. Yacht storage and maintenance has never been this simple and convenient!

Hinckley Yacht Services technicians store and maintain hundreds of Hinckley Jet boats annually in this fashion. This intimate familiarity provides our clients with peace of mind knowing that the required maintenance is done efficiently and at the highest possible quality anywhere.

The following list summarizes many of the individual procedures that are done as part of this complete service package:

- Delivery from home dock location
- Complete sea-trial, testing and inspection upon arrival at Hinckley Yacht Services
- Full mechanical decommissioning and winterization
- Storage in one of our clean, well lit and heated storage buildings
- Full Electronics/Electrical decommissioning
- Battery charging throughout storage period
- Full engine, jet drive, bow thruster, generator and systems maintenance
- Full jetstick maintenance, inspection and testing
- Complete antifoulant application to hull bottom and polish of hull and deck
- Full mechanical / electrical commissioning prior to re-delivery
- All stainless polished and full cleaning of deck, interior and bilge spaces
- Cushions and canvas are removed and cleaned and reinstalled just before delivery
- Bare teak is cleaned and oiled
- Complete sea-trial, testing and inspection prior to re-delivery
- Delivery back to home dock location
